

BH Program Descriptions/TJC reference grid
Revised – November 2, 2017

All programs accredited through The Joint Commission (TJC) must meet all applicable standards in the **Comprehensive Accreditation Manual for Behavioral Health Care (CAMBHC)**. The chapter in the manual titled “Standards Applicability Process (SAP)” provides the guidance to determine which standards apply. Throughout the standards manual, there are additional standards that apply to specific services (e.g., opioid treatment, residential, respite care) and populations (e.g., children and adolescents).

The chart below is meant to be a one-page reference guide identifying the Behavioral Health Care Settings and Services as described in CAMBHC manual [“Standards Applicability Process (SAP)” chapter] that correspond to each of the program descriptions identified in the Community-Based Behavioral Health Programs and Services regulations (COMAR 10.63). Applicable standards from the “Medication Management” chapter may also apply to each of the Settings and Services listed in the crosswalk.

Specific questions regarding applicability and/or interpretation of specific accreditation standards should be referred to TJC (per TJC, there is also a service profile function in the TJC on-line manual that can be used to customize accreditation requirements).

BH Program Description	2017 TJC Behavioral Health Care Settings and Services
Group Homes for Adults with Mental Illness	Group Home; Mental Health; Adult
